

REACH

REACH (Registration, Evaluation and Authorization of Chemicals) is the European Union's (EU's) landmark regulation that potentially affects companies that sell chemicals into the EU, regardless of where they are manufactured. This requirement includes risk assessment and characterization (as in hazard and exposure) for a multitude of products, and requires complete understanding of the process to authorize their sale into the EU.

Practical Solutions

We provide you with experts "on both sides of the pond" to help you evaluate your product decisions. Our services include:

ASSESSMENT: With our experts, your team will determine where and when it makes sense to register your products. We will help you understand what applies, what the alternatives are, the timing of activities and what the effort will be. With this information, you can bring the business case to management – for each of your products.

RISK CHARACTERIZATION: Our team will provide a solid methodology to conduct risk characterizations of your products. We will conduct the entire analysis or participate as a member of your team.

REGISTRATION AND AUTHORIZATION: We will provide assistance in the process to register and authorize those substances that you will continue to sell into the EU.

TRAINING: We offer training on REACH compliance basics and associated specifications. We provide you with critical knowledge about REACH compliance timing, applicability and the path forward for affected companies.

REACH compliance is a challenge for any organization. The regulation comes with direct and indirect costs across your entire supply chain. Partnering with a team that will provide you all the facts, all the alternatives and help you make the best decision for your organization will ensure that you are best positioned to maximize benefit from this new regulation.
